Practice Assignment 4

Sean van der Merwe

2022

1. Create an empty document with your details in the header, and the date and assignment name on the first page.
2. Visit https://seanvdm.co.za/shinyapps/quizapp1/
3. Generate a problem
4. Copy the problem to your document
5. **Think** about the problem, then search and ask for information about all the terms and concepts you don't understand.
6. Look at the options and decide which one you think is correct, then **type out** that option in your document (you can't copy the options).
7. Select your option and make a note in your document whether it is correct or not.
8. If it is not correct, then stop and think about the problem some more, and search out more information.
9. Write down and try your second guess, third guess, etc. until you see which is the correct answer. Write down the correct answer in your document.
10. Repeat Steps 3 to 9 for the next problem. Do this 15 to 20 times.
11. Submit your document on Blackboard in the space provided.

Note that marks will be given for following the instructions, not getting everything right. If you cheat you only cheat yourself and will lose marks too. You should not be getting everything right first try.
